

LED Tailboards

LED Tailboards

Our LED Tailboards have been designed in accordance with the NRA's Temporary Traffic Management Guidance Handbook, which states that any vehicle stopping on the road for works purposes or inspections should be conspicuously marked in the same manner as the work vehicles.

Benefits & Features

- + Overall design is derived from NRA's Guidance on Traffic Management Handbook which states that non-standard vehicles (trucks etc.) used as part of short term operations must be made highly conspicuous with appropriate markings and signage as per other works and warning vehicles.
- + Signs are fitted with 4 x 200mm Hi-Vis flashing Amber LED lamps that are EN 12352 compliant (this compliance is mandatory for warning and safety light devices for road use). These are powered from the host vehicle and have an additional outdoor rated ON/OFF switch mounted on the rear of the tailboard sign.
- + Night time dimming of the lamps.
- + EN 12899 compliant reflective class RA2.
- + Facility for easy mounting and removal of additional roadwork signs.
- + Sign is made from aluminium and is durable, light and non-corrosive.
- + Mounting bracket made from plated steel and allows for variable height positioning and supports the sign while the vehicle is moving.
- + Sign is easily mounted or removed from the rear of the vehicle and is fitted with 2 handles which assist the process (2 people could fit or remove the sign in a matter of minutes).
- + Sign is interchangeable with other vehicles, subject to the vehicles being fitted with the bottom (receiving) part of the mounting bracket.

Complies with the requirements of the Road Vehicle Lighting Regulations and the United Nations Economic Commission for Europe (UNECE) Regulation 65 on Special Warning Lamps.
